

Company Presentation and information

imc Test & Measurement GmbH (Germany)

February 2019

- Founded in 1988
- Offices in Germany: Berlin, Frankfurt, Stuttgart
- Subsidiaries in China, France, Netherlands, Switzerland and the USA
- Approximately 250 employees (thereof ca. 60% developers and engineers)
- Cooperation with 26 companies in 31 countries

Management: Kai Gilbert, Dr. Dietmar Sprenger, Ralf Winkelmann

Produced in Berlin, used worldwide

imc Test & Measurement GmbH & partner network

- **imc** is a leading supplier of test and measurement equipment for the productive acquisition, processing and analysis of data

- **productive testing** means for us that our customers reach their goals faster and more efficiently
- exceptional test & measurement tools, turnkey solutions and application-specific enhancements enable our customers to achieve significant productivity gains

Single source solutions

From signal capture to test reports

Sensor & telemetry solutions

The right equipment for every need

Software for the entire test & measurement process

Test reports – fast and professional

Turnkey solutions

imc ACADEMY: training & seminars

Broad product portfolio

Product portfolio

With more than 11 product lines, in-depth application know-how and training programs, we offer our customers a wide range of comprehensive solutions.

imc – providing innovation-driving ideas and efficient solutions for challenging markets.

Transportation

Energy

Machinery

In addition to these areas, our equipment can be found in many other interesting applications as well.

Automotive and vehicle industries

Reaching solutions faster

Mobile applications

- Endurance testing
- Climate testing
- Operational stability/fatigue testing
- Cold-start behavior
- Model comparison in vehicle trials
- Brake tests
- Crash tests
- Vehicle behavior
- Vehicle dynamics
- Engine and powertrain
- Performance tests

Test stands - Applications

- Component test stands
- Test stands for motors & powertrains
- Hardware-in-the-Loop (HiL) test stands (simulation)
- Noise & sound tests
- Climate and wind-tunnel testing
- Test facilities for exhaust systems
- E-motor test stands (development & End-of-Line)

ISO & standard tests

- Acceleration tests
- Fuel consumption measurements
- Noise & vibration testing
- Passenger safety
- Brake tests

Our customers

In the automotive and vehicles area

Milestones in imc history

- 1996: imc developed the first Ethernet-based system with synchronous CAN
- 1998: car manufacturers approved imc μ -MUSYCS for in-car class counting tests
- 2002: more than 5,000 imc CANSAS modules ordered for Mercedes motor test stands
- 2003: developing a measuring system for climatic tests together with Ford Europe
2003 imc integrates hardware and software for vehicle electronics (LIN, FLEX-Ray, J1939, CCP, KWP 2000, DiagOnCAN, XCPoE)
- 2004: Wind tunnel test: Ferrari F1 team
- 2005: PSA and Japanese auto manufacturers use imc products for component testing
- 2008: Toyota runs imc FAMOS-Software for data analysis
- 2011: Powertrain teststand for electric drives (Fraunhofer Bremen)
- 2014: TAKATA: Drive-by-Wire car component test rigs – world-wide
- 2015: Opel: installation of gear-box component test rig incl. climatic simulation
- 2016: imc CANSASfit a new series of robust, compact and clickable modules

OEM contracts

- BOSCH
- AVL
- Horiba / Schenck
- FEV

What we offer:

- Intelligent measurement technology and software tools
- Economical partial or complete solutions from a team of experienced and field-proven measurement technology experts for all your measurement tasks
- Transferring our targeted know-how to you by keeping in close communication
- Training
- Test stand development – customer and application-specific software
- Personnel contracting and equipment rental
- Calibration, adjustment, modification, repair, update

The following editions of imc FAMOS are available:

imc FAMOS Reader 7.4 (free of charge)

Data import, curve window, report generator, data browser (only viewing function)

imc FAMOS Standard 7.4

Data import, curve window, report generator, data browser

Data analysis, Macro Editor, Data export, Dialogue Editor to open dialogues

imc FAMOS Professional 7.4

Data import, curve window, report generator, data browser

Data analysis, Macro Editor, Data export, Dialogue Editor to open and create dialogues

Spectrum analysis and class counting

imc FAMOS Enterprise 7.4

Data import, curve window, report generator, data browser

Data analysis, Macro Editor, Data export, Dialogue Editor to open and create dialogues

Spectrum analysis and class counting

Class counting, Order tracking

imc FAMOS Enterprise 7.4: 30day trail license available

To test each imc FAMOS edition, start imc FAMOS by using of start options

The following editions of imc STUDIO are available:

imc STUDIO Standard 5.2

Device configuration and visualization, customized curve window, printable PDF reports

imc STUDIO Professional 5.2

Device configuration and visualization, customized curve window, printable PDF reports

Project management, full screen view for customized projects, imc STUDIO Sequencer

imc STUDIO Developer 5.2

Device configuration and visualization, customized curve window, printable PDF reports

Project management, full screen view for customized projects, imc STUDIO Sequencer

Scripting, imc Automation (e.g. for test stands), Layout designer

Optional special tools:

imc STUDIO Video 5.2 – synchronized video acquisition

imc STUDIO Monitor 5.2 – multi-client monitoring and visualization

imc Online FAMOS – real time analysis on data streams direct in the imc hardware

imc Inline FAMOS – analysis on data streams during the measurement on the PC

Components (“plug-ins”) from imc STUDIO

Enables network-wide operation of all systems via a common operating user interface appropriate for all levels of users

The screenshot displays the imc STUDIO software interface, which is used for network-wide operation of measurement systems. The interface is divided into several sections:

- Top Panel:** Shows the date and time (19.08.2011 09:44) and various status indicators like Temperature (26.6) and Window Position (91).
- Control Panel:** Features buttons for "Start cycle", "Stop cycle", "ALARM", and "Report".
- Measurement Gauges:** Includes analog-style gauges for current (27.9 A), voltage (305), power (4), and Battery (60).
- Data Plots:** A line graph shows "Wm_pos" over time, and another graph displays "VITESSE_VEHICULE_ROUES" (Vehicle Speed) and "RAP_ENGAGE_CALCULE" (Calculated Gear Engagement Rate).
- Channel Configuration:** A table lists eight channels (Channel_01 to Channel_08) with their connectors and status (Active).
- Channel Definition:** A section for "Channel_07" shows a diagram of a RAM device connected to a Device, with options for "Save data" and "Auto filename".
- Vehicle Monitoring:** A central image shows a silver car in a test cell, with a person standing next to it. A "manual control" button is visible.
- Speed and RPM Gauges:** Two large gauges show "RPM x 100" (2301) and "Speed [km/h]" (73 km/h).
- Power and Temperature Gauges:** A gauge shows "P [kW]" (73) and another shows "oil temperature" (80).
- Logbook:** A section at the bottom left shows the user "BERLIN/Rene Büniger".

... with imc SEARCH test data management

The screenshot shows the web interface of imc SEARCH. The browser address bar shows 'demo'. The page title is 'SEARCH'. The left sidebar shows a tree view of the database structure:

- Database
 - Devices under test
 - Trains
 - HighSpeed
 - Undergrounds
 - Files
 - MyHelpFiles
 - MyPictures
 - Others
 - Instruments
 - Projects
 - All brake tests
 - Train Brake Test
 - Test cell tests
 - Users
 - Abfrageordner
 - Eigene Abfragen
 - Öffentliche Abfrage
 - Sunny with SI-A-X

The main content area shows a table titled 'Device Under Test' with the following columns: Name, Device_description, Serial_number, Manufacturer, Model, Weight [t], and Length [m]. The table contains the following data:

Name	Device_description	Serial_number	Manufacturer	Model	Weight [t]	Length [m]
SI-A-X1		567	Si	443-2010	33	72
ST-CC-T	beta	568	St	445	34	74
BO-Ze1	white	569	Bo	444	52	108
AL-XRR33		570	Al	AL-446	38	82
Ka63	series	449	Ka	2014	40	96

Online calculations with imc Online FAMOS (OFA)

The screenshot displays the imc Online FAMOS software interface. The main window is titled "imc_CS_7008_N_144163 (SN 144163) - Online FAMOS". The interface is divided into several sections:

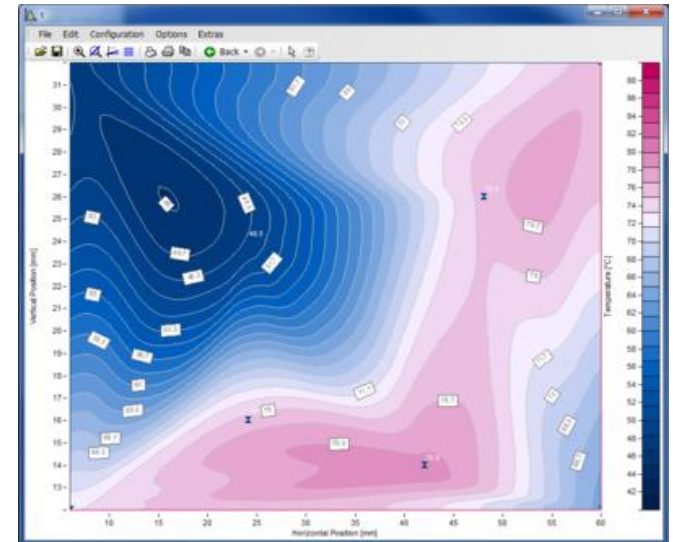

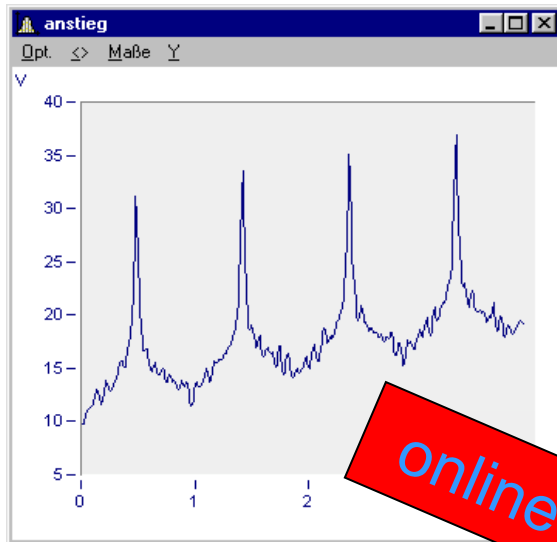

- Channel List:** A tree view on the left shows various channels. "Channel_001" is selected, and a new virtual channel "FFT_channel_001" is being created.
- Function List:** A table on the right lists available functions. The "FFT" function is selected, which is described as "Magnitude spectrum".
- Operations:** A text area at the bottom shows the command: `FFT_channel_001 = FFT(Channel_001, 0, 1024)`. A note indicates that "commands can also written by hand".
- FFT Assistant:** A dialog box titled "FFT" is open, showing configuration options for the FFT function. The "Magnitude spectrum" output is selected, and the "Input channel" is set to "Channel_001". The "Type of window" is set to "Rectangle" and the "FFT-length" is set to "1024".

Red arrows and text annotations highlight the steps:

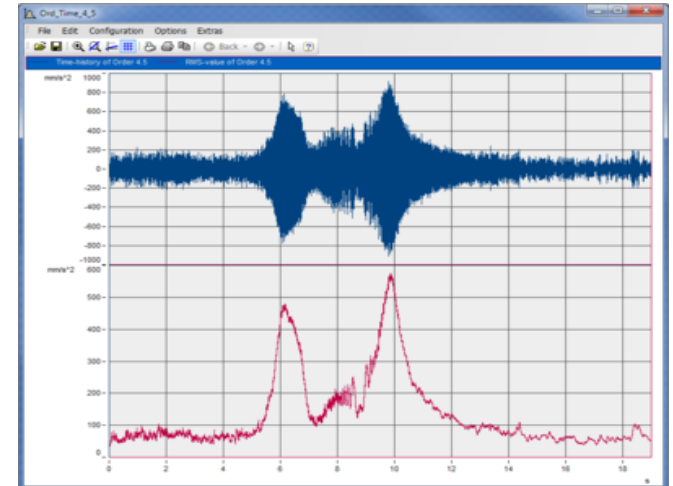

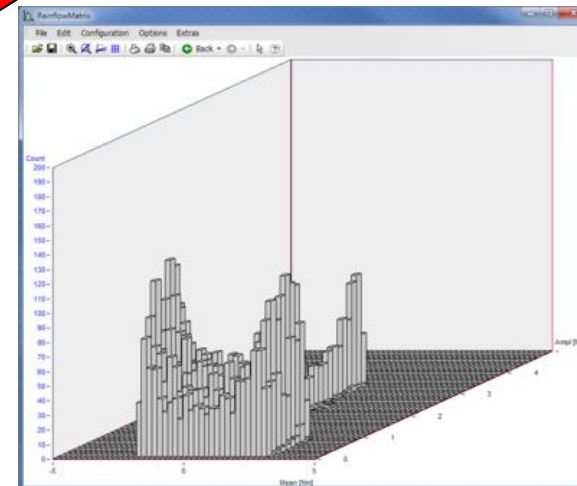

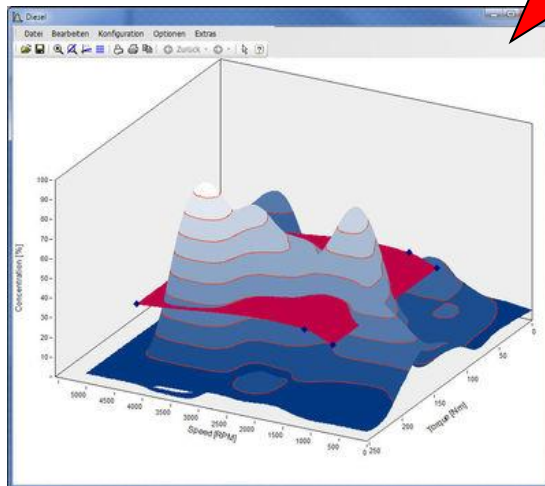

- 1. select and drag channel:** An arrow points from "Channel_001" in the Channel List to the FFT function in the Function List.
- 2. select function:** An arrow points from the "FFT" function in the Function List to the "FFT" function in the Operations area.
- 3. use the assistant:** An arrow points from the "FFT" function in the Function List to the "FFT" dialog box.
- 4. new virtual channel:** An arrow points from the "FFT_channel_001" in the Channel List to the "FFT" function in the Operations area.

imc Online FAMOS

real time analysis on data streams direct in the imc hardware

online

imc Online FAMOS

real time analysis on data streams direct in the imc hardware

The screenshot displays the imc Online FAMOS software interface, which is used for real-time analysis on data streams. The main window is titled "Online FAMOS <PID battery controller>" and shows a "Device: imcSpartan_130263".

The interface is divided into several sections:

- Channel List:** Shows "Channel_01" selected under "Analog inputs". Other options include "Virtual channels", "Local channels", "Local structures", "Process vector", and "Digital outputs".
- Function List:** Includes "Control functions", "Controller", "Controls", "Events, Filter", "FFT", and "FFTAplitudePhase".
- Operation Panel (Rosette1):** Displays "Analysis of strain measurements with rosettes". It includes settings for "Rosette type" (Rectangular rosette [0° /45° /90°]), "Selection of channels with measured strains in [μ. m/m]" (Grid A: Channel_01, Grid B: Channel_02, Grid C: Channel_03), "Material" (Poisson's ratio: 0.30, Modulus of elasticity: 210 [N/mm^2]), and "RPMs" (6000). It also shows diagrams of rosette configurations (A, B, C).
- 3D Surface Plot:** A 3D surface plot showing data over time (0 to 200 [turns]) and torque (0 to 200 [Nm]). The vertical axis represents a value from 0 to 250.
- Heatmap:** A 2D heatmap showing data over time (0 to 200 [turns]) and torque (0 to 200 [Nm]). The vertical axis represents RPMs (0 to 6000).
- Report Generator:** A window titled "Report Generator [Motor Report.drb]" showing a "Motor Vibration Analysis" report. The report includes:
 - Test Profile:** A graph of RPM vs. time (0 to 15 s) showing a ramp up to 6000 RPM and then a hold. A table below shows: Frequency Range (RPM 6000 to 1000), MAX (19.00 s), MIN (GOOD!).
 - Order Analysis:** A graph of Order vs. time (0 to 16 s) showing vibration levels. A table below shows: Order (1.50, 3.50, 4.50, 6.00), Ampl. (1.004, 0.638, 0.583, 0.641), Energy (768.2, 1110.9, 767.5, 1258.9), Reson (5200, 3450, 2750, 3650).
 - Test Details:** A graph of Order vs. time (0 to 28 s) showing "Extraced Order 4.5" and "Filtered Order 4.5".

The following analyzer of imc WAVE are available:

imc WAVE Spectrum Analyzer

Sound power-level testing

Octave & 1/3-octave analysis

Frequency and time weighting

Vibration analysis

FFT analysis

imc WAVE Structural Analyzer

Calculation of transfer functions (magnitude and phase)

Coherences

Auto-spectra & DOFs

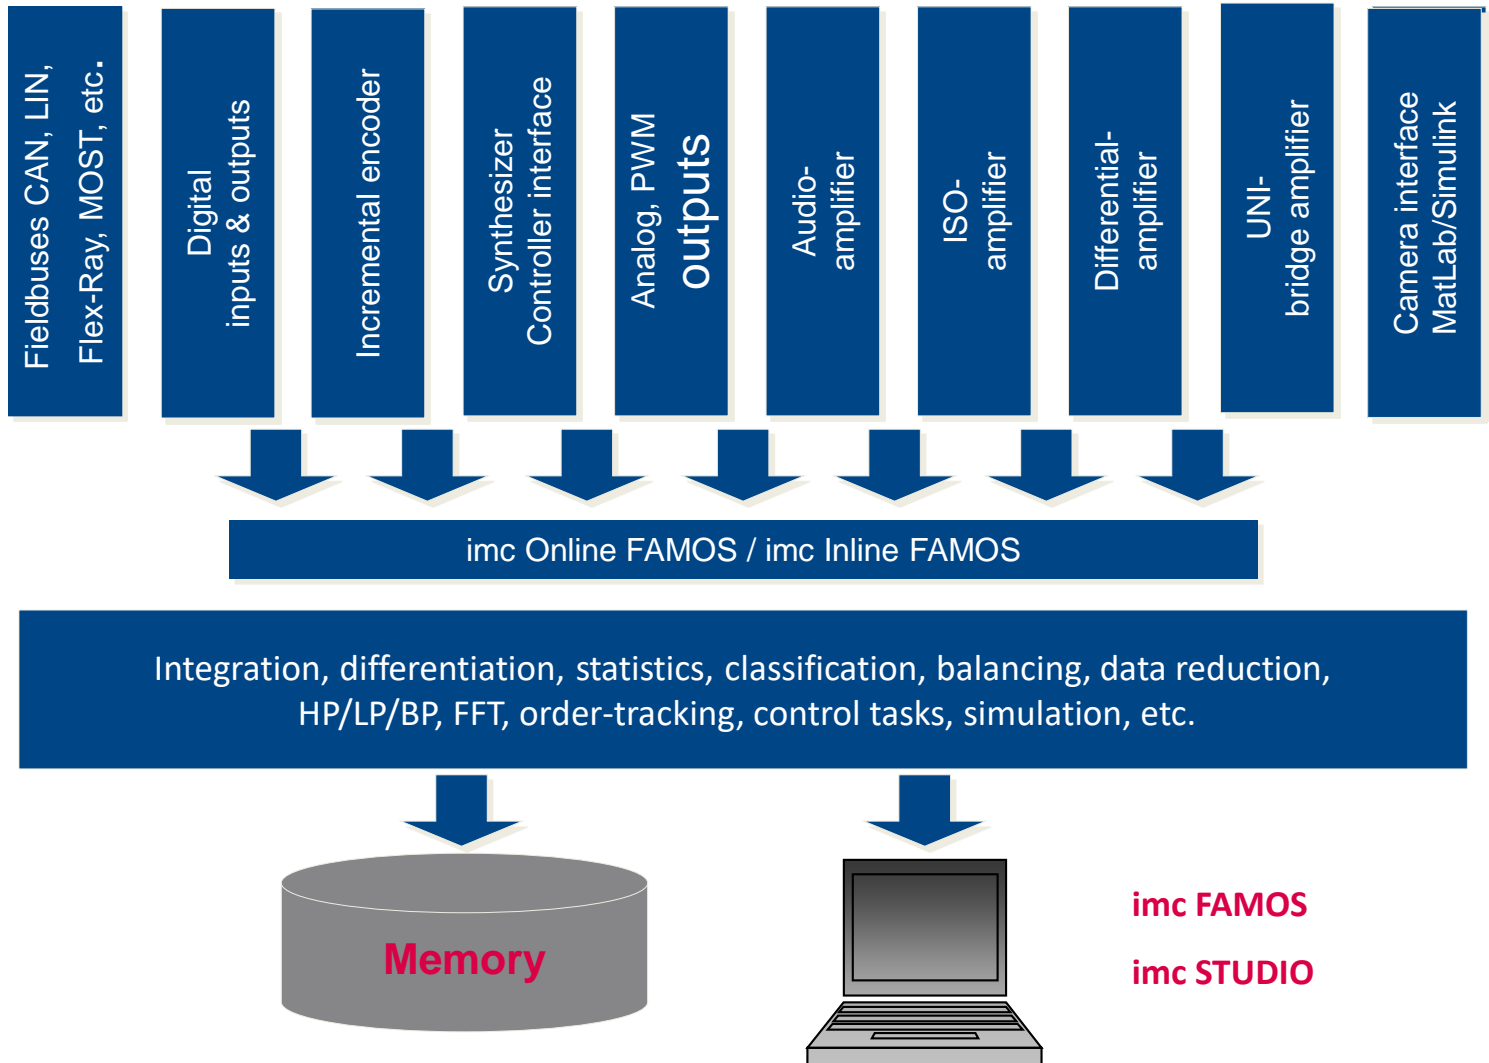

Export to Excel or modal analysis software ME' Scope™

imc WAVE Order Tracking Analyzer

Order tracking spectra based on measured RPM

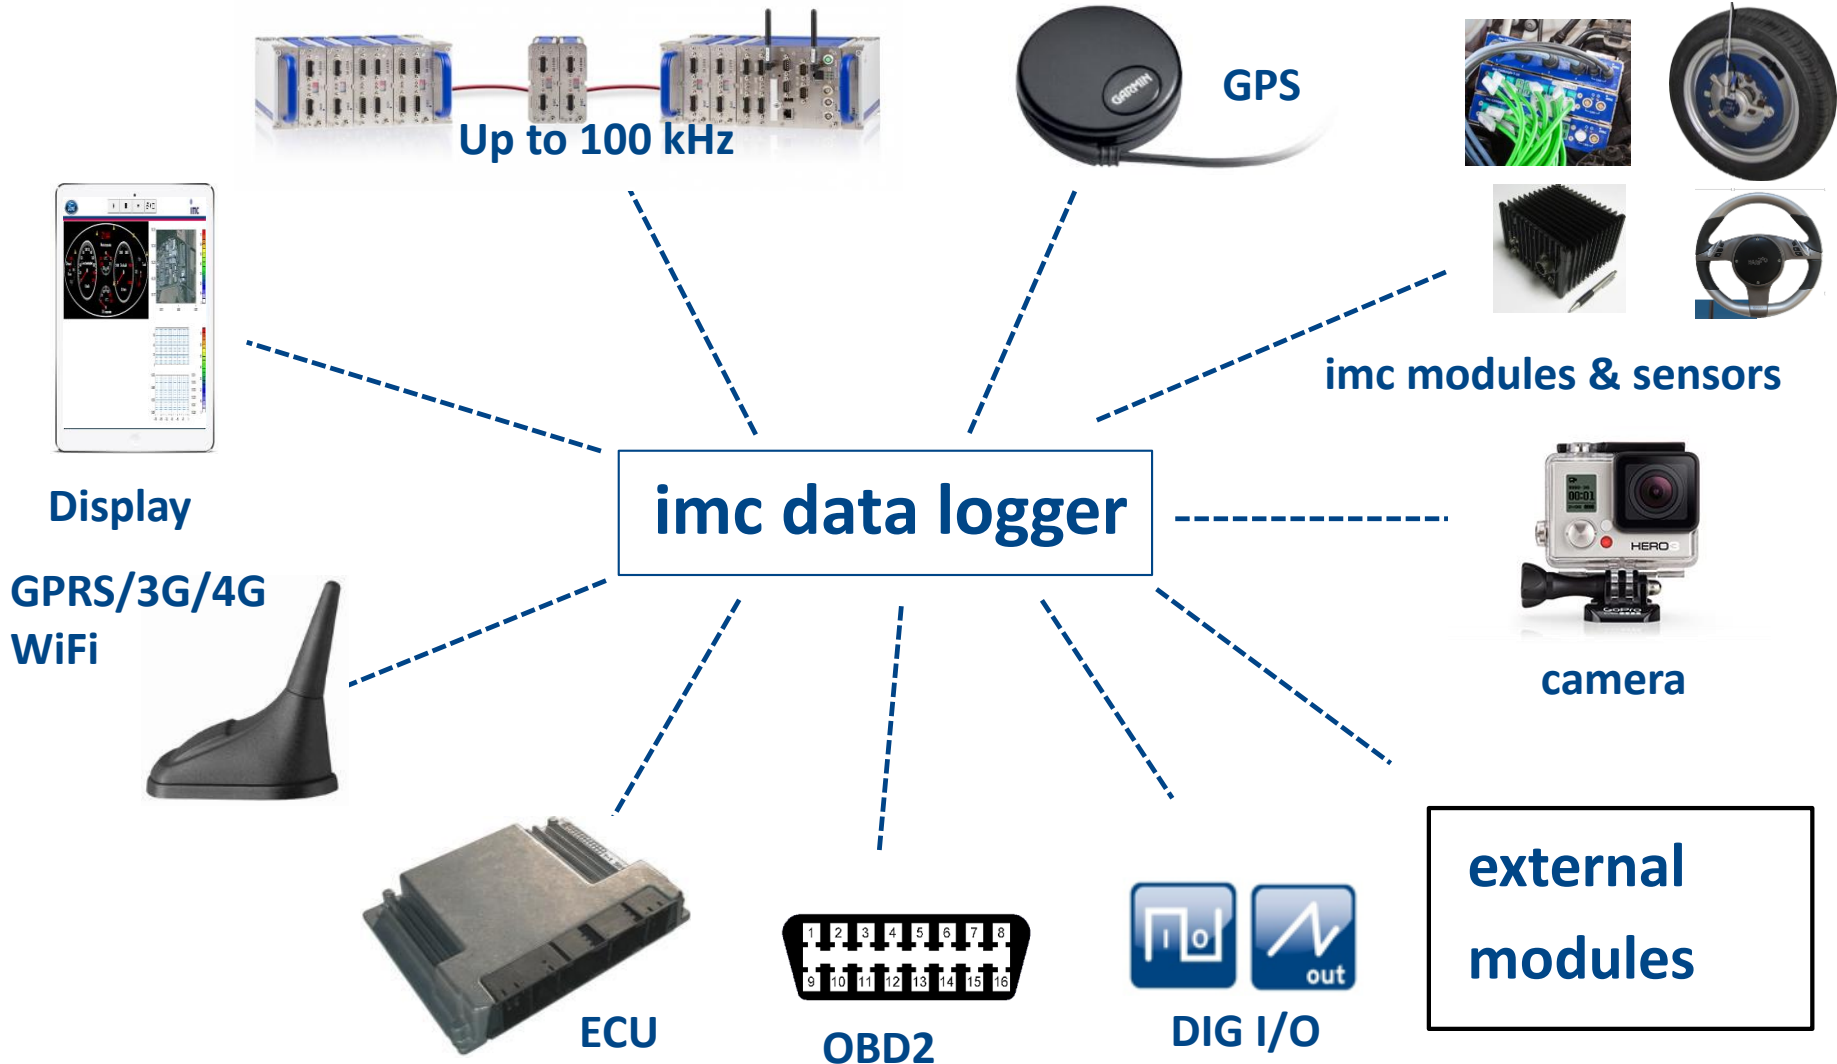

Noise & vibration levels vs. RPM (various classifications)

Transfer functions vs. time and angle

imc hardware

Equipment for different measurement and data analysis

imc **CRONOScompact** (Adaptable measurement and control system for mixed signal testing)

imc **CRONOSflex** (Modular, distributable measuring system, easily connectable to one another)

imc CRONOS-SL (Measurement systems for extreme environments)

imc C-SERIES (compact measurement systems)

imc BUSDAQflex (fieldbus Datalogger)

imc CANSASflex (CAN modules for mobile or test stand, easily connectable to one another)

imc CANSAS-SL (CAN modules for mobile or test stand applications)

imc CANSASfit (robust IP65 CAN modules for mobile, easily connectable to one another)

imc μ -CANSAS (robust IP65 CAN modules for small and mobile conditions)

imc SPARTAN (cost effective measurement and control system)

Bridge and universal amplifiers:

- UNI-4 (Channel-wise sensor supply & isolation)
- UNI2-8 (Universal)
- DCB2-8 (DC and strain gauge, multi-channel cost-effective)
- BR2-4 (DC, strain gauge and CF Modus)

Acoustic and NVH measurement amplifiers:

- Audio2-4 (DIN & Standardized filter)
- ICPU2-8 (multi-channel cost-effective)

DI/DO/ENC/DAC module:

- DI- 16
- DO-16
- DAC-8
- Synth-8 (8 channel synthesizer + signal sequence generator)
- HRENC4 (256 MHz sampling e.g., PWM-measuring)

HV measurement amplifier:

- HV2U2I
- HV4U

Isolated & differential measurement amplifier:

- ISO2-8
- ISOF-8
- LV3-8

High-resolution current measurement module:

- IHR

Key features

- 8 channels
- Temperature measurement
- 1 kHz/channel sampling rate
- 100 Hz Bandwidth
- mechanically compatible with imc CANASASflex / imc BUSDAQflex
- Fiber connector: E2000 / APC

➤ *fdx* does not stand for fiber-optic, but for a new **variant** of the mechanical / electrical concept of imc CANSAS*flex*.

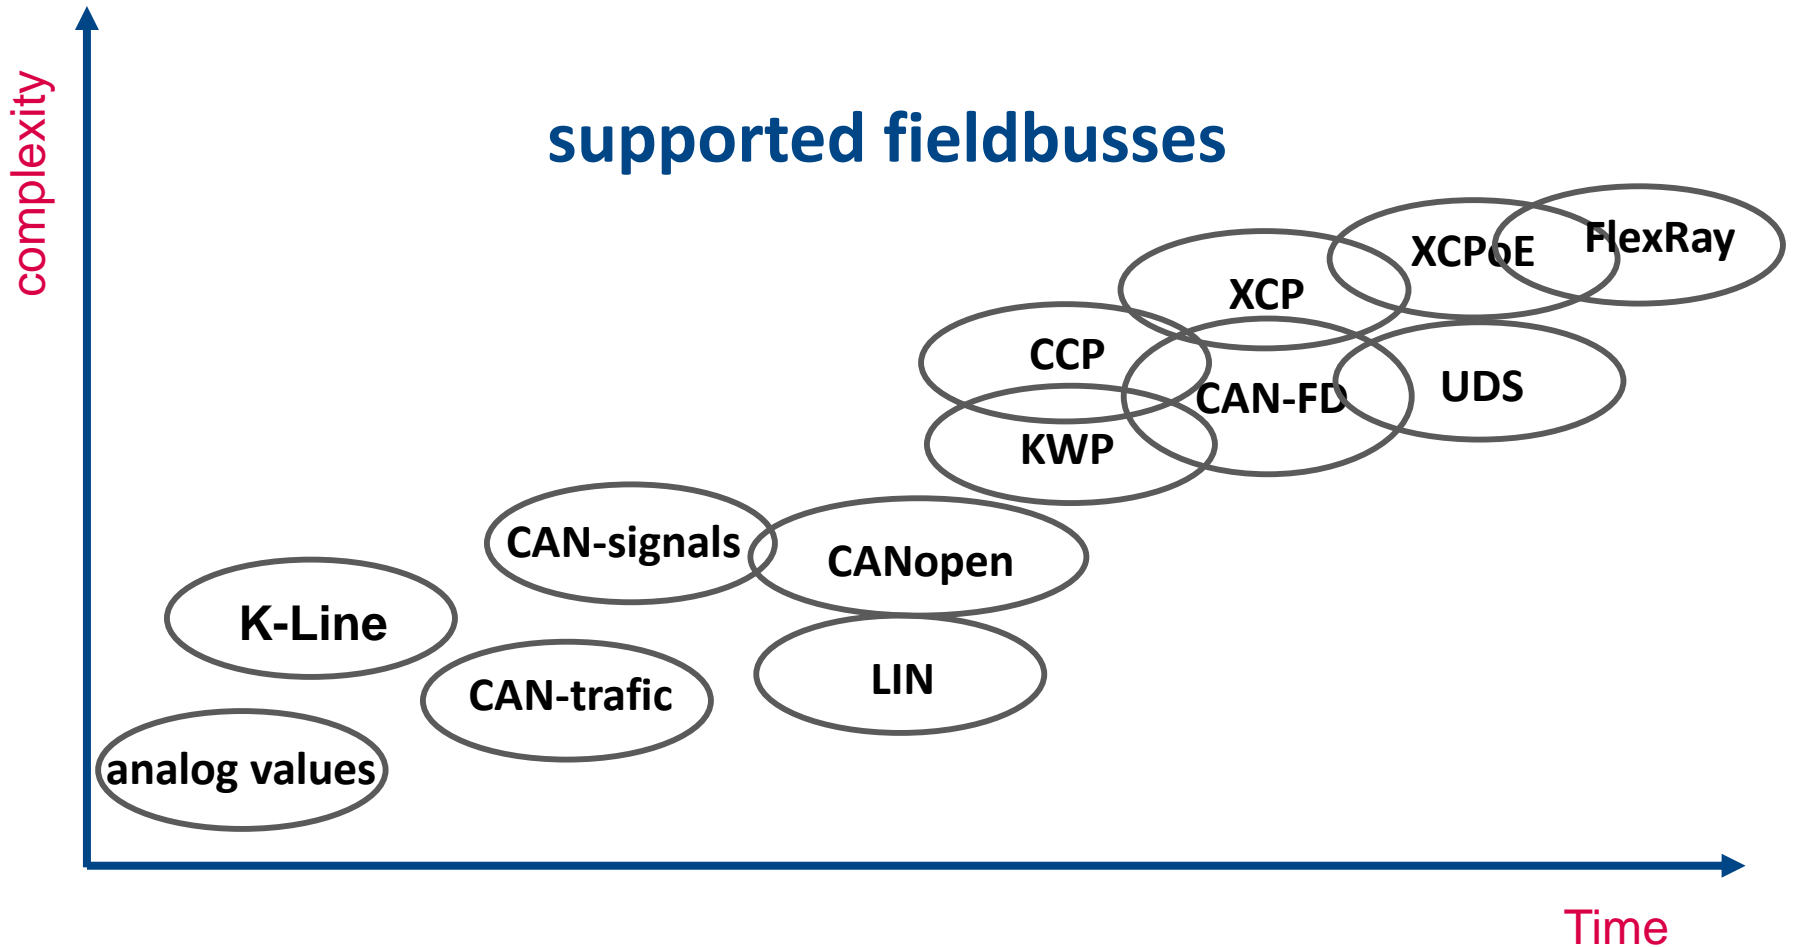

Bus interfaces:

- CAN-Bus
- LIN-Bus
- Flex-Ray
- XCPoE
- RS232/485/...
- ARINC
- MVB
- SENT
- ...

Optical distance and speed sensor (LUXACT)

Wheel Force transducer (WFT-Cx)

Steering wheel sensor CLS accelerometers

Digital telemetry

Optical distance and speed measurement

LUXACT 1D Neo

LUXACT 1D Compact

LUXACT 2D Compact
(in development)

1D optical + 2D inertial

Rail brake tests:
Smooth & pitch
compensated speed signal

Since 2017 also with 6D
inertial sensors

1D optical + 6D inertial

Automotive:
Brake testing,
Driving performance,
Consumption measurement

2D optical + 6D inertial + GPS

Automotive:

- like 1D Compact+
- Handling & dynamics: European Stationary Cycle test, aquaplaning, track deviation, lane change, ...)
- ADAS & Safety Systems Testing: adaptive cruise control, autonomous emergency braking and collision prevention, lane keeping assistance systems

IMU = Inertial Measurement Unit

LUXACT 1D Compact

Contactless and precise

- Braking test with automated braking distance determination
- Trigger input and direction recognition as standard
- ABS & ESP test
- Coast-down test, consumption measurement
- Compact and light: 950 g !!!

Technical data

- Measuring range: 0.2 - 300 km/h
- Accuracy v: $\leq 0.1\%$ FS
- Accuracy s: ≤ 3 cm at approx. 40 m
braking distance 100 - 0 km/h
- Working range: 400 mm $\pm 30\%$
- Output rate: 250 Hz (opt. 1000 Hz)
- Full IMU
(Inertial Measurement Unit, 6 DOF)

Connection to imc

- CAN bus
- TTL-Pulse Output

Summary:

- Sensor synergy of optics and IMU
- No additional electronics box
- Quick and easy to install
- Surface independent
- measuring range 0.2 ... 300 km/h
- With 6 DOF IMU, angular speeds and accelerations in x, y and z-directions can be measured with high resolution
- Suitable for a variety of dynamic tests
- Can be used in a wide variety of climatic conditions
- Very good price/performance ratio

speed measurement

LUXACT *1D Compact*

LUXACT Neo 1D

Non-contact and precise

- Brake testing
- Slip-free measurement
- Surface independent
- Suitable for harsh environments

Technical data

- Low-Speed Type: 0.1 - 50 km/h
- Standard Type: 0.2 - 270 km/h
- High-Speed Type: 0.3 - 400 km/h oder
0.5 - 500 km/h
- Accuracy v: $\leq 0.1\%$ FS
- Accuracy s: ≤ 3 cm at approx. 40 m
braking distance 100 - 0 km/h
- Working range: up to 1000 mm $\pm 30\%$
- Output rate: 50 Hz (up to 1000 Hz)
- Light source: IR-LED
- Full IMU
(Inertial Measurement Unit, 6 DOF)

imc AS-series

Static and low-noise

- Static MEMS accelerometers
- Small and light
- Can be used everywhere where accelerations have to be measured reliably
- Any cable length
- Driving dynamics, fatigue strength, comfort measurement, structure monitoring

Technical data

- Very low noise (low-noise sensor elements)
- TEDS (Transducer Electronic Data Sheet) included as standard (IEEE P1451.4)
- Direct connection to all imc bridge or voltage amplifiers with sensor supply
- Measuring range: $\pm 2 \text{ g} \dots \pm 400 \text{ g}$

Connection to imc

- Analog including TEDS

imc AD-series

Static and low-noise

- Piezoelectric IEPE accelerometers
- Isolated housing
- Can be used everywhere where accelerations have to be measured reliably
- Any cable length
- Machine dynamics, vibration, spectral, modal analysis

Technical data

- Very low noise
- TEDS (Transducer Electronic Data Sheet) included as standard (IEEE P1451.4)
- Direct connection to all imc measurement amplifiers with IEPE input (constant current)
- High bandwidths up to 23 KHz
- Measuring range: ± 60 g; ± 500 g; ± 600 g
- M5 bottom thread

Connection to imc

- Analog including TEDS

Steering sensor CLS^x / CLS-E

Steering sensor CLS^x / CLS-E

Highest precision with smallest dimensions

- Usability measurement
- Comfort measurement
- Misuse measurement
- **Driver assistance systems**
- **Autonomous driving**

Technical data

- Steering torque: $\pm 100 \text{ Nm}$
- Steering angle CLS^x: $\pm 1440^\circ$
- Steering speed: $\pm 1000^\circ/\text{sec}$
- Resolution: 0.02°
- Acceleration in x-, y-, z- direction up to 5 g
- Rotational Acceleration $\pm 10.000^\circ/\text{s}^2$
- Breaking strength $\leq 500 \text{ Nm}$

Connection to imc:

- CAN bus
- Analog output

Summary:

- Smallest steering sensor on the market
- Universally applicable thanks to individual adapters
- Very fast and problem-free vehicle change possible
- Measurement range and sensitivity suitable for driver assistance systems and autonomous driving
- Original steering wheel, airbag and ESP functionality are retained
- For mobile applications as well as for test bench applications

Digital telemetry

D^x telemetry

Technical data

- Up to 4 transmitters
- 16-Bit digitized signals
- 868 MHz- or 2.4 GHz-Band
- Analog outputs or CAN bus
- Power supplies:
 - Inductive, battery or rechargeable
- Up to 6 channels per transmitter:
 - Strain gauge, temperature, acceleration
- Sampling rate SCT summary:
 - Max. 4.6 kHz (868 MHz)
 - Max. 5 kHz (2.4 GHz)
- Sampling rate RCI summary:
 - Max. 7.2 kHz (868 MHz)
 - Max. 8 kHz (2.4 GHz)

Connection to imc:

- CAN bus
- Analog output

D^x digital multi-channel telemetry

Application solutions

D^x digital multi-channel telemetry

Power supplies

KMT 1-channel telemetry

KMT telemetry for rotating applications

Measurement of voltage, strain gauge, thermocouple and PT100/PT1000

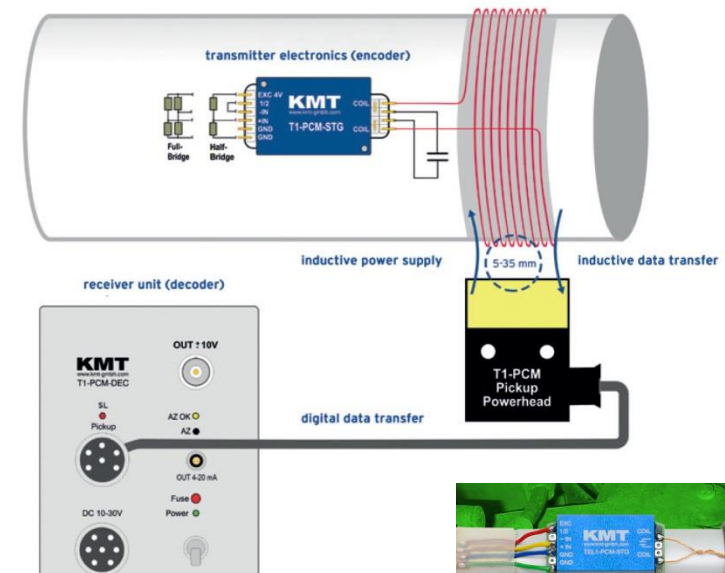

- T1-PCM-STG
- TEL1-PCM
- TEL1-PCM-FLEX

Technical data

- Inductive data transmission
- Output (decoder) analog $\pm 10V$
- Max. signal bandwidth 1.2kHz
- Max. sampling rate: 6.41 kHz to 7 kHz
- Operating temperature: 40 °C ... +85 °C
- Resolution: 12 Bit up to 16 Bit
- Gain: 250 to 8000

Connection to imc:

- Analog output

KMT multi-channel telemetry

Measurement of voltage, strain gauge, thermocouple, PT100/PT1000 and IEPE

- MTP-NT
- CTP
- CTP-Rotate

Technical data

- Inductive data transmission
- Output (decoder) analog $\pm 10V$, Ethernet
- Max. signal bandwidth 24 kHz
- Max. sampling rate: 62.5 kHz to 100 kHz
- Max. data rate: 5 Mbit/s to 10 Mbit/s
- Operating temperature: 40 °C ... +85 °C
- Resolution: 16 Bit
- Distance: 50mm to 2000m

Connection to imc:

- Analog output
- Ethernet (TELDEC-Interface)

KMT multi-channel-telemetry

Applications

6 component wheel force transducer (WFT-C^x)

Wheel force transducer

Measurement of all forces and torques acting on the wheel

- Very high fatigue strength
- Weatherproof to IP 67
- Shockproof up to 100 g
- Flexible due to modular design
- Precise on test bench **and** in mobile use

Technical data (aluminum)

- **F_x, F_z:** ± 45 kN, **F_y:** ± 25 kN
- **M_x, M_y, M_z:** 8.75 kNm
- **Angle resolution:** 0.072 °
- **Accuracy:** > 0.2 %
- **Sampling rate:** up to 5 kHz
- **Protection class:** IP 67
- **Temperature:** -40 °C .. 105 °C
- **Weight:** 7.8 kg (w/o adapter)

Connection to imc:

- CAN bus
- Ethernet

6 component wheel force transducer (WFT-C^x)

Features!

- Overload protection (mechanical)
- High sensitivity and dynamics increase measurement accuracy
- Rain and/or snow operations
- All off-road tests possible
- High lateral acceleration possible
- Internal spirit level
- Surge protection (power supply)
- No crosstalk of the measurement signals
- Flexible applications with short set-up times
- Compatibility with different tire sizes
- Compatibility with different vehicles
- Quick and easy conversion to other vehicle types without recalibration

6 component wheel force transducer(WFT-C^x)

Technical data

Parameter	Value		
Material	Aluminium	Titanium	Steel
Measurement principle	temperature compensated strain gauge application		
Measurement range: forces	Fx, Fz = ±45 kN Fy = ±25 kN	Fx, Fz = ±60 kN Fy = ±30 kN	Fx, Fz = ±60 kN Fy = ±30 kN
Measurement range: torques	Mx, My, Mz = ±8,75 kNm	Mx, My, Mz = ±10 kNm	Mx, My, Mz = ±10 kNm
Protection class	IP66, IP67		
Sampling rate per channel	up to 5 kHz		
Angular resolution with 5000 increments	0.072°		
Linearity	<0.2% FS		
Hysteresis	<0.2% FS		
Crosstalk	<0.2% FS		
Low pass filter (cut-off frequency 1200 Hz)	6-pole Butterworth filter		
Weight without adapter	<7.9 kg	ca. 10.5 kg	ca. 17.5 kg
Rim diameter	min. 14" (356 mm), 13" by request		
Hub diameter with adapter	max. 5.5"		
Operating temperature	-40 °C up to +105 °C		
Mechanical load	stress analysis according to BMW QV 36026		
Shock proof	max. 100 g		
Rotational speed	max. 2300 rpm (ca. 278 km/h)		
Safety	mechanical breakage protection		
Dimension: outer diameter (without adapter)	317.5 mm		
Dimension: inner diameter (without adapter)	203 mm		
Dimension: height	76 mm		
Temperature drift	0.005% / °C		
Mounting bolts	32		
Adaption	customer-specific adaption for any vehicle possible		

6 component wheel force transducer (WFT-C^x)

WFT-C^x vs. WFT-C^{xs}

	WFT C ^x aluminum	WFT C ^{xs} aluminum
Measurement range: Force	F _x , F _z = ±45 kN F _y = ±25 kN	F _x , F _z = ±25 kN F _y = ±20 kN
Torque	M _x , M _y , M _z = ±8,75 kNm	M _x , M _y , M _z = ±6 kNm
Weight	<7.9 kg	<5.9 kg
Outer Diameter(OD) Inner Diameter (ID) Height	317.5 mm 203 mm 76 mm	317.5 mm 203 mm 61 mm
IP Protection	IP66 and IP 67	IP66 and IP67
Temperature range	-40°C – 105°C	-40°C – 105°C
Accuracy	Gain < 0.2% FS Hysteresis < 0.2% Linearity < 0.2% FS Angle Resolution 0,072 ° (5000 Ink)	Gain < 0.2% FS Hysteresis < 0.2% Linearity < 0.2% FS Angle Resolution 0,072 ° (5000 Ink)
Sampling Rate	5 kHz	5 kHz

Designed for high lateral dynamic

1-component wheel torque transducer (WTT-D^x)

Wheel torque transducer for My

Specifications:

- Compatible with 14" ... 20" wheels
- Measurement of drive and brake torques
- Waterproof (IP 67)
- Wireless
- Transmitter electronics integrated in measuring body
- $M_y = \pm 3000 \text{ Nm}$, optionally $\pm 6000 \text{ Nm}$
- Power supply: recha. battery (> 60 hrs runtime)
- Operating temperature: $-40 \text{ }^\circ\text{C} \dots 105 \text{ }^\circ\text{C}$ (limited by battery)
- Telemetry display with analog and CAN output
- Simultaneous acquisition of up to 4 WTTs by the proven D^x telemetry receiver
- Weight: approx. 4.75 kg with transmitter unit

Connection to imc:

- CAN bus
- Analog output

Thank you for your attention
